CLUTCH COVER REPLACEMENT

Aftermarket Clutch

Laycock Clutch

The original Laycock manufactured clutch cover shown above is now replaced with the aftermarket style that has a release bearing plate fitted - these covers interchange directly without the need for special modification.

CLUTCH COVER > PTO ADJUSTMENT

The new cover assembly is factory set to suit the original thickness mated components and flywheel depth. However, if all the components are not replaced the setting may change. It is recommended that this dimension is checked in the tractor.

Install the cover on the flywheel with the intermediate and clutch plate to be fitted. Check the PTO grub screw clearance, and if necessary adjust this by using a feeler gauge or similar. This can be accessed through the side of the cover in 3 positions.

The recommended clearance is .060" to .065" (1.5mm to 1.65mm)
