AFTERMARKET UPGRADED CLUTCH ASSEMBLY

135 0001 CH

135 0001 CH-L

Ag Clutch has an upgraded cover assembly available to replace the original "RT" style used in the above applications.

The clutch cover is slightly different in the lever and spring arrangement however these covers are completely interchangeable without the need for any special modification.

The alternate heavy duty style shown is recommended as an alternate upgrade to the original.

It incorporates lever "roller bearings" for longer life and reduced pedal effort, whilst utilizing the Lipe design cover to provide higher clamp load for increased security against slippage.
