FLYWHEEL SHIMS - CHECK DEPTH

Ensure that the shims are reinstalled if used with original cover.

Total flywheel depth must = 35.7mm

Some early models have flywheel shims (1.7mm) + 34.0mm pot depth where later models now have NO SHIMS with (35.7mm) pot depth only.

Ag Clutch can supply the same original style Valeo clutch as well as an aftermarket LuK type. We recommend these be installed as a mated set.

Ag Clutch does not advise interchanging the original and aftermarket covers and clutch drive plates. The tolerances and/or the hub offsets may vary which may result in release problems or premature failure.
