Early series (Grey/Gold) = 228 2301 MF-E (28.6mm f/wheel) no shims

FLYWHEEL VARIATIONS

228 2301 MF

228 2301 MF-E

Check flywheel depth to establish the correct replacement cover assembly.

Some early series tractors have a shallow depth flywheel fitted, this must be mated to the correct cover listed.

Although the covers may appear to be the same, they are specially designed to operate on their respective flywheel depths only.

Ag Clutch has available the correct cover to suit these early series applications.

Note > DO NOT interchange the early with the later type by incorporating extra shims.
