AFTERMARKET / ORIGINAL CLUTCH INTERCHANGE

Ag Clutch Part Number example >

228 2801 ZE/231 2801 ZE

Original type

228 2802 ZE/231 2802 ZE

Luktype

133 1602 ZE

133 1602 ZE-L

Ag Clutch can supply the same original style clutch as well as the Luk aftermarket type. The covers may vary slightly, for example the original assembly has the PTO hub bolted separately to the flywheel where the Luk may incorporate this into the cover using fewer bolts.

These also may be differences in the lever arrangement and the bolt fixing height, with some requiring a new bolt set. Apart from the above, these covers are completely interchangeable without the need for special modification.

Ag Clutch do not advise interchanging the original and aftermarket clutch drive plates - the tolerances and/or the hub offsets may vary and this may cause non release problems or premature clutch failure.
